

Subversion plug-in update for IntelliJ IDEA 7.0.5

This update fixes the **NullPointerException** when trying to **Browse Subversion Repository** or perform any other action which triggers the repository browsing.

The exception is written to the log and nothing happens when you try to work with Subversion from IntelliJ IDEA.

The problem appears **only under JDK 1.6.0_12 and newer versions** while IntelliJ IDEA 7.x was tested on older JDK 1.6 versions which are not affected.

To apply the update download **svn4idea.jar** file attached to this document and replace the old version in **IDEA_HOME\plugins\svn4idea\lib** directory while IntelliJ IDEA is not running.

Another possible workaround is to run IntelliJ IDEA under JDK 1.6.0_10.
