

IDEA JAD - No decompiled java file is...

Satish Jeejula 5 posts since

Hello All,

I downloaded latest version of IntelliJ IDEA (build #2236 - version 4.5.1). To this I have added IDEAJAD plugin (1162.2) to it.

When I try to decompile a class (ctrl+click), I get the confirmation window. But the decompiled java file is not getting generated.

I have checked every config option for IDEAJAD, did not find any thing that explains this behaviour. Also no visible exception is thrown.

Is there anything else I need to do for this version of plugin (1162.2) and IDEA (build #2239)

Thanks.

Satish

The problem is in com\tagtraum\ideajad\DecompilationAction class. Change line 88 of the source from

IDEA JAD - No decompiled java file is...

```
indexOfChosenDir =  
Messages.showChooseDialog(localStrings.getString("message.choose_target_dir"),  
"IdeaJad-Plugin", Messages.getQuestionIcon(), dirStrings, dirStrings[idx]);
```

to the

```
indexOfChosenDir =  
Messages.showChooseDialog(localStrings.getString("message.choose_target_dir"),  
"IdeaJad-Plugin", dirStrings, dirStrings[idx], Messages.getQuestionIcon());
```

and recompile...

IntelliJ IDEA (build #2250 - version 4.5.3)

IDEAJAD plugin (1162.2)
