Hello all,

Visual SourceSafe has long been a popular choice for source code control and file management purposes. As collaborative team becomes a prevailing form, it is common now to have members from different geographic location sharing source code and other files when working on a project.

SourceSafe is designed for project teams on local network, this is why we need a tool enabling each member to easily connect to VSS database from anywhere with internet using.

Software purchasing, unlike selecting other IT commodities, will arouse non-retrievable loss in case the potential bugs of a product. So reliability should be regarded as the primary request for a SCC tool.

With several years of experience in this domain, I'd like to help you with some good suggestions as I can if you meet any SCC problem and you trust me.

Anyway, leave me a message.

Regards!

sourceanywhere

The above URL is unavailable.

Let's remotely access to VSS

## **Introduction**

We are pleased to announce the release of SourceAnywhere 4.0, a major release of SourceAnywhere.

SourceAnywhere (SAW) is a SourceSafe remote access tool, which provides reliable, fast and secure VSS remote access.

The key features of SAW are listed below:

\*-100+ times faster than VSS Explore over WAN

-Securer in remote access

-Seamlessly IDE integrated\*

For an overview of SourceAnywhere please refer to

[http://www.dynamsoft.com/Products/SAW\\_Overview.aspx](http://www.dynamsoft.com/Products/SAW_Overview.aspx)

## **Highlights of the major improvements in SAW 4.0**

SourceAnywhere 4.0 continues its features of previous versions with major innovations and enhancements.

Here are the highlights of new features in SAW 4.0:

Let's remotely access to VSS

\*-Cross Platform

-Macromedia DreamWeaver MX 2004 Integration

-More powerful Explore Client operations\*
