

How to create a Web service ?

[Arun Gupta](#) 30 posts since

With IDEA 6.0, I searched:

- bundled help
- online documentation
- forums
- intellij.net

but not able to find any documentation on how to create a Web service starting from Java and deploy it on a JavaEE compatible server, for example GlassFish. I could configure GlassFish but what other steps are required to develop/deploy/invoke the Web service ?

Thanks,

-Arun

That is not an IntelliJ problem. Read up on Apache Axis or some other implementation. Spring also has an implementation that uses Apache Axis underneath.

How to create a Web service ?

I'm familiar with developing Web services using multiple toolkits but does IntelliJ not provide any support for that. For example, NetBeans allow me to create a Web service [1](#) without knowing any toolkit specific details. Does IntelliJ has that capability ?
