

# ReSharper, x64 and Find Dialog

---

Guest

Hi,

If you happen to have the problem with Visual Studio crashing when opening Find dialog on XP/2003 x64, then Microsoft has confirmed this to be a bug and provides hot fix per request. Details are published on MS Connect: <https://connect.microsoft.com/VisualStudio/feedback/ViewFeedback.aspx?FeedbackID=311712&wa=wsignin1.0>

If you are experiencing this issue you will need to contact Microsoft Customer Service & Support (<http://support.microsoft.com>) and ask for the Windows Hotfix with ID 947841. Please note that this is a patch applies to Windows and not Visual Studio. If you have any difficulty in obtaining the patch ask the CSS representative to contact me (Sean Laberee).

I am also pleased to announce that we have created a workaround in VS 2008 SP1 which eliminates this problem and the need for the patch. That workaround is queued for checkin to our build process and will be available in the Beta of the service pack.

A quick update on the windows patch. I've confirmed with our support team that if you call in for this hotfix you will not be charged. They will set up a "Hot Fix" case for you. I've also received a report that there was some confusion as to whether this fix is for Win2003 or XP. I've confirmed that this fix does in fact apply to both releases.

You can also request the hotfix by email:

ReSharper, x64 and Find Dialog

<https://support.microsoft.com/contactus2/emailcontact.aspx?scid=sw;en;1414&ws=hotfix>

Much easier than a support call 😊
