

Change background color of Groovy tags

Aug 28, 2008

Hi.

I've tried to search on this issue but couldn't find anything, and I hope that I've put my thread in the correct category.

Lately I've been using a darker color scheme and now when I edit my .gsp-files with a Groovy-tag, these tags are in a color I really don't appreciate. I'll attach an image of this. I've tried to find some setting in IDEA but haven't found any.

My question will therefor be: how can I change the turquoise background color on the tags to something else?

Thanks in advance

/mazzler

Hello.

Change background color of Groovy tags

We don't provide color settings page fo GSP in Groovy version 1.6 and earlier now. It will be added in one of next releases soon.
