

Any thoughts on when T-SQL might appear?

Just wondering if anyone from JB could comment on when we might get a Sybase/MS-SQL/T-SQL dialect?

As a somewhat related question: do you think it would ever be possible to get IntelliJ to recognize "scope" (that's probably the wrong word) for the following type of code:

```
OPEN cur_foolDs
FETCH cur_foolDs INTO @currentUserID

WHILE @@sqlstatus = 0 BEGIN
    EXEC sp_UpdateNewPassword @currentUserID , @newPassword
    FETCH cur_foolDs INTO @currentUserID
END
```

I would love, love, love to have IntelliJ be able to tell me, when I put my cursor next to 'END', where the matching 'BEGIN' is. So maybe I don't mean "scope" so much as "bracket matching" ?

Hello Mike,

Just wondering if anyone from JB could comment on when we might get a Sybase/MS-SQL/T-SQL dialect?

We haven't started any work on it yet.

Any thoughts on when T-SQL might appear?

As a somewhat related question: do you think it would ever be possible to get IntelliJ to recognize "scope" (that's probably the wrong word) for the following type of code:

```
OPEN cur_foolDs\ FETCH cur_foolDs INTO @currentUserID\ \  
> WHILE @@sqlstatus = 0 BEGIN\ EXEC sp_UpdateNewPassword  
> @currentUserID , @newPassword\ FETCH cur_foolDs INTO  
> @currentUserID\ END
```

I would love, love, love to have IntelliJ be able to tell me, when I put my cursor next to 'END', where the matching 'BEGIN' is. So maybe I don't mean "scope" so much as "bracket matching" ?

If we implement full support for Transact-SQL, this functionality will of course be provided.
