I'm getting 'Cannot perform commit: corresponding change list cannot be found' error when performing RemoteRun, even though it's successful.

Is there anything I could do get the right changelist setting? I don't really understand the error to be honest, I'm just committing every changes, no specific changelist used.

cheers

Where do you see this message (IntelliJ IDEA, Eclipse, Visual Studio)? What version of IDE do you use? What version of TeamCity is installed?

I'm sorry I assumed IDE integration was only available from IDEA.

I receive this message when committing from IDEA with the latest #9572 build and TeamCity 3.1.2 #6881.

Cannot perform commit: corresponding...

thanks

I would suggest you to try to upgrade to 4.0.1. If error will still be there please submit a bug report to our tracker: <http://jetbrains.net/tracker/workspace/TW>

If there are any exceptions in the IDEA log file attach them too.
