The Ruby version of Netbeans allows you to select text, press the double quote key, and have the text surrounded with double quotes. You can also select text that is double quoted, and press a single quote and the text is now surrounded with a single quote. If you select text in the middle of a string and press the pound key (#), it will surround it with #{}.

These are very convenient helpers when developing in ruby. Is there a similar feature in RubyMine?

Hi Andy

+1 for this feature - I also miss this from NetBeans.

Regards, Tony

For what it's worth, this is a very handy feature in textmate too.

Hi guys,

I've created issues

* <http://www.jetbrains.net/jira/browse/RUBY-3228>

* <http://www.jetbrains.net/jira/browse/RUBY-3229>

* <http://www.jetbrains.net/jira/browse/RUBY-3230>

for your requests. Feel free to vote for them(to help us prioritize tasks), comment and watch changes

Hello guys,

The Ruby version of Netbeans allows you to select text, press the double quote key, and have the text surrounded with double quotes. You can also select text that is double quoted, and press a single quote and the text is now surrounded with a single quote. If you select text in the middle of a string and press the pound key (#), it will surround it with #{}.

Selected text to quoted text

These are very convenient helpers when developing in ruby. Is there a similar feature in RubyMine?

We've implemented surround selection with quotes or parentheses action (<http://www.jetbrains.net/jira/browse/RUBY-3228>) and

surround selected text within string with #{} by typing # (<http://www.jetbrains.net/jira/browse/RUBY-3228>).

These features will be available if coming EAP.

Thanks,

Oleg
