

Teamcity Visual Studio plugin slowdown

[John Doe](#) 1 posts since

May 1, 2009

I recently upgraded our solutions to Visual Studio 2008. After installing the teamcity plugin, whenever I do a Personal Build now, the application seems to hang for about 5-8 minutes where before it would take about 30 secs to gather all the changed files. If I fire up Procmon.exe, I can see that it's continuously communicating with the Teamcity server so it is doing work of some sort. I've had a look at the Reporting Issues page but I can't tell how to enable logging for the Visual Studio plugin.

Can anyone point me in the direction of resolving this issue?

I have same behavior but with Visual Studio 2005, after upgrading from 4.5 to 5.0. Collecting Subversion changes become VERY slow.

Teamcity Visual Studio plugin slowdown

We had really serious problems with performance on collecting Subversion changes in 5.0. For details, please take a look at <http://youtrack.jetbrains.net/issue/TW-10573>

But we were able to improve performance of Local Changes view in 5.0.1.

It is important to make sure that you are faced with precisely this situation.

You could find our logs in %Temp%\JetLogs directory.

Thanks Evgeniy,

I've installed 5.0.1 and problem is gone.

John, whether your problem is still reproduced at 5.0 version of plug-in?
