

ReSharper 4.5 and Microsoft Code...

Alexander Nikitin 1 posts since

Sep 20, 2009

What should I do for the ReSharper to pick up Contract.Assume/Require/Invariant as the not-null check?

Creating custom XML for Microsoft.Contracts.dll containing annotations like the following won't help.

Also, note that WYSIWYG editor in the forum wont display at all in Opera 10 and looks horribly corrupted in IE8 (can't get the code formatting to work properly at all)

```
< member name="M:Microsoft.Contracts.Contract.Assume(System.Boolean)">< attribute
ctor="M:JetBrains.Annotations.AssertionMethodAttribute.#ctor"/>< parameter name="condition">< attribute
ctor="M:JetBrains.Annotations.AssertionConditionAttribute.#ctor(JetBrains.Annotations.AssertionConditionType)">< argumen
argument></ attribute></ parameter></ member>
```

Hello Alexander

Could you please attach your .xml file for Microsoft.Contracts.dll? Thank you!

Hi Andrey,

I have the same problem as Mike (in the same thread) with **Microsoft Code Contracts** and ReSharper 5:

1. Would you send me the xml file that fix it or there's another solution?
2. How do I use the xml file?

Thanks,

Leo

Editor works fine in Opera 10 if you go to site preferences and select identify as firefox. The site needs to not treat opera differently, as that is a real pain!

Hi Alexander,

ReSharper 4.5 and Microsoft Code...

I've attached the XML I created for use with the Microsoft Code Contracts library. I hope it works for you.

Cheers,

Mike

Apologies, it seems the attachment didn't survive the migration from the newsgroups to the forums. Here is a link:

<http://72.167.90.173/Microsoft.Contracts.xml.zip>

Cheers,

Mike

Hi

This StackOverflow article helped me a lot:

<http://stackoverflow.com/questions/929859/resharper-possible-null-assignment-when-using-microsoft-contracts>
