I have a PsiPolyVariantReference where I implemented the getVariants method. However, ever time I hit Ctrl-Space to do the completion, my call to getVariants is interrupted by another thread. What information do you need from me to help diagnose what's happening?

Hello Brad,

What exactly do you mean by "interrupted by another thread"?

I have a PsiPolyVariantReference where I implemented the getVariants method. However, ever time I hit Ctrl-Space to do the completion, my call to getVariants is interrupted by another thread. What information do you need from me to help diagnose what's happening?

My apologies. I was having a bad mental day. I had thread scope breakpoints set and I saw another thread hit. It didn't occur to me to at the time to check the threads dropdown. 😊 It is working fine.
