

Perforce Checkout Rules - CRLF Errors

Peer VM 1 posts since

Jan 21, 2010 I have a shared perforce VCS and I want to use checkout rules on a per project basis. But whenever I introduce the checkout rules TeamCity never completes it's checkout from perforce because of "Problem while loading patch data stream: CRLF expected at end of chunk: 10/98". I would much appreciate it if anyone could explain what this error, point me to other teamcity logs which might be more descriptive or provide an example of a checkout rule using perforce.

Note; This happens right after the files have been copied from perforce onto my build agent like this; (I have approx. 99Mb of files)

```
[12:25:58]: Updating sources: server side checkout... (42m:23s)[12:25:58]: [Updating sources: server side checkout...] Will perform clean checkout. Reason: Agent doesn't have any version of the project sources[12:25:58]: [Updating sources: server side checkout...] Building clean patch for VCS root: perforce[12:37:11]: [Updating sources: server side checkout...] Transferring repository sources: 58.0Mb so far...[12:39:29]: [Updating sources: server side checkout...] Transferring repository sources: 81.01Mb so far...[12:41:47]: [Updating sources: server side checkout...] Transferring repository sources: 85.0Mb so far...[12:43:48]: [Updating sources: server side checkout...] Transferring repository sources: 92.01Mb so far...[13:04:09]: [Updating sources: server side checkout...] Transferring repository sources: 98.99Mb so far...[13:08:22]: [Updating sources: server side checkout...] Transferring repository sources: 98.99Mb so far...[13:08:22]: [Updating sources: server side checkout...] Problem while loading patch data stream: CRLF expected at end of chunk: 10/99[13:08:22]: Problem while loading patch data stream: CRLF expected at end of chunk: 10/99 Tags: perforce, checkout, rules
```

Hello Peer,

Thanks for the report and sorry for the problem. Could you please file an issue to our issue tracker <http://youtrack.jetbrains.net> and provide the following information:

- Version of the perforce server and perforce client
- TeamCity version
- server logs (TeamCity/logs/teamcity*.log)
- build agent logs (buildAgent/logs/*)

Perforce Checkout Rules - CRLF Errors

Thanks!

KIR
