Hello,

Open IDE Help and search 'Authenticating to Subversion' there. The first found topic contains the info you are looking for.

Hope it helps.

-Eugene

I get error autenticate always when trying comit or update.

See attached screenshot.

And I never see dialog box when must enter my login and password.

I try clear Auth cache.

I try delete this record and add new.

Where I can enter svn login and password

Nothing helps.

No, it doesn't pop up any more, you will only see a red balloon saying you should go to the "pending notifications".

Please go **to the lower right corner and click "!" sign** there.

A picture's worth a thousand words:

You'll see authentication dialog immediately only when you're going to some URL outside your working copies.

To Repository Browser, for instance.

The "pending notifications" icon never appears to allow me to authenticate. I am trying to commit files. Am I missing something? See screenshots.

It is my notification.

See screenshot.

1. Restart WebIDE
2. Go to Version Control - Browse Subversion Repository
3. Click on '+' left to needed repository. If you didn't add any - add new and then click.
4. You will see next window:

Where I can enter svn login and password

Hallo

the window to enter the details to the svn connection, when I want to start browsing the svn, doesn't show up. But I get the box in the upper right corner with the hint to update the svn configuration. When I click the link in that box, a new window opens, where I can enter my login and password for the svn, and I can mark a checkbox to store the password. After doing this, there is a message in the lower left corner 'cannot store password: forbidden by "store password=no". My problem: where can I change this, so that the password is stored?

Where I can enter svn login and password

Thank you for your patience and help.

Thomas.

Please use only English language on all JetBrains resources.

Sorry, but it is a little bit confusing, when the language of the gui is german and the language spoken in the community is english. All in english would be better.

Hello Thomas,

There's a property in Subversion 'config' file, 'store-passwords'

It is described here:

<http://svnbook.red-bean.com/en/1.5/svn.advanced.confarea.html#svn.advanced.confarea.opts.config>

Your Subversion configuration directory is set (usually to default value) in PhpStorm/  
WebStorm in Settings | Version Control | VCSs | Subversion | Subversion Configuration  
Directory
