I have few problem during integration (by reflection) with IntelliJ Task plugin.

Problem are related to inadequate number of invokations to registered TaskListener in TaskManager

Exaclly if switching between task A and B event TaskListner.taskActivated() is acalled twice with the same arguments for details see (<http://youtrack.jetbrains.net/issue/IDEA-51832>)

Another thing is removing by reflection (created TaskListnerProxy) NPE occurs for more details go to (<http://youtrack.jetbrains.net/issue/IDEA-51834>)

Does anyone has similar issues?
