Hi,

I am new to Java and trying out IntelliJ IDEA v9.0.1. I'm going thru the [web_services_with_IntelliJIdeas.pdf](#).

I'm to the point of creating a sample client (I did the sample server and am running on apache tomcat). After generating the sampleclient project, If i right click on the project, select webservicess\generate java code from wsdl, enter in the wsdl url:

<http://localhost:8080/services/HelloWorld?wsdl>

And then hit enter, i get this exception:

```
Argument 0 for @NotNull parameter of com/intellij/openapi/module/ModuleUtil.getDependencies must not be null
```

What is wrong?

Hello,

exception running the web_services with...

I have the same problem. Did you find a solution?

Thank you,

I will try to upgrade as well.
