

JavaScript Inspection: Errors for...

[Kai Schlichting](#) 7 posts since

Sep 7, 2009

Hi!

I am searching in the settings where I can change the "level" for the inspection warnings mentioned above. Per default, they seems to be only warnings, I would like to get an error at this point. For example, the following code only raise warnings but I want errors:

```
function(unusedParam){  
  return [1,2,3,];  
}
```

In the inspection tab of the settings, these two inspection options aren't listed, where should I search for it?

Thx!

Unused parameters

JavaScript Inspection: Errors for...

or

Unneeded comma

It seems you cannot configure warning level for it, please file an issue in our bug tracker - <http://youtrack.jetbrains.net/issues/RUBY>
