I just installed the latest nightly build (1611), and noticed that not only

is there no option in the options dialog to turn on resharper color

identifiers, but there are no "ReSharper" entries in the fonts and colors

dialog in the VS2008 options.

Am I missing something?

Hello Paul,

Option is on ReSharper / Options / Code Inspection / Settings page. Do you see checkbox there? As for Font & Colors, we are trying to resolve an issue.

Sincerely,

Ilya Ryzhenkov

Ah, well that's part of the problem. It's not where I expected it, and that page is only available when a solution is open (and I had no solution open while I was poking around trying to find the setting). Doesn't it make more sense to be under "Environment -> Editor"?

identifier highlighting

I found another post about this issue that mentioned "clearing the caches" and referenced a registry key location. Can I ask for clarification of what that means? Do you mean delete the "Cache" key itself entirely, or just all the child keys of that key? Or does it matter? I'm just hesitant to do something that might break anything.

Hello Paul,

You can export key to file before deleting. And yes, deleting Cache key itself would be fine.

Sincerely,

Ilya Ryzhenkov
