

Problem with SourceGear Vault VCS root

Jason Duffett 8 posts since

Feb 9, 2010

We are evaluating TeamCity for use in our development environment, using the new SourceGear Vault plugin to connect to our Vault VCS repository.

I'm having huge problems with the collecting changes from the VCS root.

Initially we found it very easy to setup and get some projects running but we have a strange issue that is making the system quite unusable.

After having everything setup and running build successfully for a while our projects will then start hanging on the "Collecting changes" step.

It then starts creating hundreds of copies of our source tree in the server's temporary directory until we either cancel the build, or the server runs out of disk space!

After stopping the build the build log contains information from the build Agent showing it was interrupted at the step:

```
[Updating sources: server side checkout...] Building incremental patch for VCS root
```

It doesn't look like anything was transferred to the build agent's work directory.

I've switched on DEBUG logging for the server VCS component but this doesn't give much more insight to the problem.

```
[2010-02-09 16:22:44,611] INFO [pool executor 2] - jetbrains.buildServer.VCS - Requesting patch...
```

```
[2010-02-09 16:22:44,611] DEBUG [pool executor 2] - jetbrains.buildServer.VCS - root details...
```

Problem with SourceGear Vault VCS root

The logs then show nothing more until the build is cancelled at which point it logs a `ThreadInterruptedException` with the stack trace shown below.

It doesn't seem to be a problem with performance of the Vault VCS repository as the server is able to download 100s of copies of our source tree to its temporary folder in a matter of minutes.

We are using TeamCity 5.0.2 (build 10784), Vault server and Java CLC 5.0.2, and the TC Vault plugin build from 5th Feb.

Any help debugging this problem would be appreciated along with some advice on how TeamCity manages temporary files as they never seem to be deleted.

Thanks,

Jason

Exception stack trace

`System.Threading.ThreadInterruptedException: Thread has been interrupted from a waiting state. ---> System.ExceptionWrapper: sleep interrupted`

`at system.Threading.Thread.Sleep(Unknown Source)`

Hello, Jason,

Thanks for your feedback!

Problem with SourceGear Vault VCS root

Seems there is a bug with patch building in the plugin. Please, create corresponding issue in our [tracker](#), post link to newly created issue here and I will investigate your problem.

TYI: In almost cases it's safe to delete TeamCity tmp folders manually.

[Jason Duffett](#) 8 posts since

Feb 9, 2010 2. **Re: Problem with SourceGear Vault VCS root** Feb 10, 2010 1:18 PM

Thanks Victory.

Issue raised at

<http://youtrack.jetbrains.net/issue/TW-10958>.

If you need anymore information (logs, etc) please let me know.

Is the problem with all the temporary folders caused by the vcs-vault plugin or is it normal for such a large number of them to accumulate without being deleted?

Jason

Thanks. The issue is open.

Let's move there for the following discussion.

>> Is the problem with all the temporary folders caused by the vcs-vault plugin or is it normal for such a large number of them to accumulate without being deleted?

Problem with SourceGear Vault VCS root

It's Vault plugin problem. Normally any activity creating temp files has to remove them.
