

Request Web Service setup information

Hello,

I am trying to configure a Web Service using IntelliJ 9.0.1 build IU-93.94 within an existing web application. I could not get it to generate wsdl file.

It does not recognize the java file as already being compiled.

However, I was able to setup a new Web Service Server and Client Program as shown in document/help sections, but I need to integrate web service within an pre-existing web application.

Here are details on what I have checked in the project setup.

Dynamic Web Application runs fine with Tomcat 5.5.27

Project Settings >

Facets > Web > mydynamicweb_project

module settings > modules > myproject (also has WebServices)

module settings > modules > myproject - click on WebServices >

shows Select WS Engine - choose 'Apache Axis' in dropdown > Apply - displays empty popup with title which shows something similar to below

'Web Service Engine is not configured'

Request Web Service setup information

Tools > WebServices > Enable Web Service Support

Choose Module: Module:mydynamic_project_module c:/projects/myproject.iml

Type: Server

Web Service: ApacheAxis

WsdITest.java is compiled and WsdITest.class exists in output directory

Tools > WebServices > Generate Wsdl from Java Code > shows below Status

"Class WsdITest was not recompiled after changes, please compile before proceeding"

Here is a sample program to test:

```
import javax.jws.WebMethod;
```

```
@javax.jws.WebService
```

```
public class WsdITest {
```

```
    @WebMethod
```

```
    public String sayHello() {
```

```
        System.out.println("In WS function");
```

```
        return "Hello, world";
```

```
    }
```

```
}
```

Is there any diagnose information I can check. I have axis jar files configured and also added javax.jar file to see if this resolves.

I have checked most places where I could be missing any steps, if there are any other things to check/contribute to this question, please let me know and I will be happy to provide details,

Request Web Service setup information

Thanks in advance,
