Hamster, dude, you've *got* to give more information!

RRS

now i have more information:

```
2010-03-13 22:06:47,833 [ 16139] INFO - ij.compiler.impl.CompileDriver - COMPILATION STARTED
```

```
2010-03-13 22:06:47,984 [ 16290] INFO - lij.compiler.impl.CompilerUtil - Initial VFS refresh took 94 ms: 0 min 0sec
```

```
2010-03-13 22:06:48,258 [ 16564] DEBUG - la.compiler.ScalacOutputParser - scalac error: Parameter '-reset' is not recognised by Scalac.
```

compiler internal error, exit code 1

2010-03-13 22:06:48,258 [16564] DEBUG - la.compiler.ScalacOutputParser - scalac error: Parameter '-reset' is not recognised by Scalac.

2010-03-13 22:06:48,258 [16564] DEBUG - la.compiler.ScalacOutputParser - scalac - help gives more information

took me a while to find the secret logging option

weird thing is, i could not reproduce this error...it just appeared at a random point in time and wouldn't go away until i figured out i had to switch "reset fsc" off. it didn't matter if "use fsc" was checked or not. unchecking everything fixed the problem.

I'm not really sure, but I have the impression that the fsc support is 2.8 specific. I hope one of the Scala plug-in principals will clarify that.

compiler internal error, exit code 1

This also brings up the point that you've told us nothing about things such as:

- IDEA version
- Scala plug-in version
- Scala version
- Java version
- Operating system
- Processor architecture

In the future, you really should make it a habit to include this information when you're reporting a problem.

- IDEA version
- Scala plug-in version
- Scala version
- Java version
- Operating system
- Processor architecture

compiler internal error, exit code 1

if i had a more specific error message, i would have given some information - but "internal error" just gave me no hint what information could help.

i tried different builds of idea, the scala plugin, scala and different java versions, but the error persisted

"... but "internal error" just gave me no hint what information could help. ..."

No error report should omit those things. As a programmer, you should know that.

And you still haven't supplied them.

it seems the project is broken. if i delete all scala files except a hello world -> still crashes

new project -> new module -> hello world -> works

new module in old project -> crash

Try to remove project caches. Press 'Invalidate caches' in File menu. Project can't be corrupted, only caches for this project.

compiler internal error, exit code 1

Best regards,

Alexander Podkhalyuzin.

i enabled the secret scala compiler logging option in some xml file and got the error message that "reset" is an unknown option. i looked at my compiler settings -> there is was, the evil checkbox. unchecked it, problem fixed.
