I am using TC4 with postgres 8.1 already. on solaris 10 Sparc.

I want to migrate to empty MySQL 5.1 database(schemauser) at the backed from current database PostgreSQL 8.1

Can i change/switch database from postgresql to mysql?

How can i use/adjust migrateDB.sh script to do that?

Serdar,

You should be able to do this by configuring dbMigration.properties to have postgresQL as source* properties and MySQL as target* ones and then running migrateDB
