

Specify alternate RSH for CVS

Guest

I have not found any way to put an alternate RSH for CVS in IDEA. In mean you can do this by adding the following

line (for example) to the IDEA startup script (under Linux) :

```
export CVS_RSH=/usr/bin/ssh
```

but I cannot found that in the UI. Would be useful.

Thanks

It is a problem (is it really that much of a problem?) with CVS. It only takes RSH from environment so that is the only way to change it. The solution for you could be to create a two-line shell script which sets the RSH environment var and then calls cvs with all parameters passed to it. Then in IDEA's CVS props dialog set 'path to cvs client' to point to that shell script and you are done.

Specify alternate RSH for CVS

fedor.
